Cosy but deadly

The carbon monoxide from a badly adjusted camping light or stove can kill.

Barbecues in enclosed spaces are lethal, too.

Make sure your camping light and stove are clean and properly adjusted. Never take a portable barbecue – or lit charcoal – into an enclosed space like a tent or caravan.

Make sure exhaust from generators is properly vented away from occupied areas

Carbon Monoxide (CO) is a colourless, odourless, highly poisonous gas that can kill in minutes. Carbon Monoxide poisoning can be caused by ANY fuel that burns or smoulders.

Watch out for the symptoms – • Mild headache • Dizziness • Nausea • Vomiting • Fatigue • Drowsiness •

CO-Awareness supports victims, their families and friends poisoned by Carbon Monoxide (CO) while trying to raise awareness among health professionals and the general public, of the dangers of CO.
