

Cheshire West & Chester Council

North West Aggregate Working Party

Annual Monitoring Report 2014

Visit: cheshirewestandchester.gov.uk

Cheshire West
and Chester

Introduction

The North West Aggregate Working Party (NWAWP) is one of nine similar working parties throughout England and Wales established in the 1970's, the core functions of which, as set out in the Planning Practice Guidance, are to:

- consider, scrutinise and provide advice on the Local Aggregate Assessments of each mineral planning authority in its area;
- provide an assessment of the position of overall demand and supply for the Aggregate Working Party area; and
- obtain, collect and report on data on minerals activity in their area.

This report should be read alongside the North West AWP Local Aggregate Assessments 2014 Final Review and the member authority's Local Aggregate Assessments.

The membership of the North West AWP is detailed in Appendix A 'North West AWP membership' and is illustrated in Map 1.1 below.

The Annual Monitoring report 2014 represents the twentieth annual report and provides sales and reserve data for the period 1 January to 31 December 2013. The report provides data for each of the five sub-regions, as illustrated in Map 1.2, of Cheshire East; Cheshire West and Chester; Cumbria; Greater Manchester, Merseyside, Halton and Warrington; and Lancashire. Due to the availability of data, results for the Cheshire East and Chester West and Chester sub-regions are reported in one chapter.

1 North West

1.1 Tables 1.1 to 1.4 provide an overview of sales, reserve and landbank figures for aggregate land-won crushed rock and sand and gravel across the north west region covering the period 1 January to 31 December 2013.

Total aggregate sales, reserves and landbank

1.2 During the 2013 monitoring period total aggregate sales fell by 12 per cent from 7.81mt in 2012 to 6.88mt, bringing sales to the lowest levels in over ten years and 6mt below the annual guidelines⁽¹⁾ for aggregate provision of 12.88mt. However, the rate at which sales are falling is the slowest since the AM07 monitoring period. Total aggregate reserves decreased by 5.9 per cent from 331.71mt as at 31 December 2012 to 312.15mt. This is 12.68mt lower than would have been expected given the low level of sales. This higher than expected fall is largely due to a reduction in the recorded level of sandstone and igneous rock reserves in Cumbria due to double counting in previous monitoring periods.

1.3 The total aggregate landbank for the north west as at 31 December 2013 is 24.2 years, based on an annual requirement of 12.88mt of primary land-won aggregate as set out in the guidelines for aggregate provision.

Table 1.1 North west aggregate landbank as at 31 December 2013

Aggregate	Landbank as at 31.12.2012 (years)	Reserves as at 31.12.2013 (mt)	Annual apportionment requirement 2005-2020 (mt)	Landbank as at 31.12.2013 (years)
Crushed rock	30.5 years	275.8mt	9.62mt	28.7 years
Land-won sand and gravel	11.8 years	36.4mt	3.26mt	11.2 years
Total aggregate landbank	-	312.15mt	12.88mt	24.2 years

Aggregate crushed rock sales, reserves and landbank

1.4 Sales of crushed rock aggregate fell by approximately 14 per cent from 5.80mt in 2012 to 4.97mt, the lowest recorded sales figure for over 10 years. The most significant fall was in sales of High Specification Aggregate (HSA) where sales fell by 25.5 per cent from 0.55mt during 2012 to 0.41mt. Sales of limestone and sandstone and igneous rock fell by 12.2 per cent and 15.1 per cent respectively.

1 National and regional guidelines for aggregate provision in England 2005 - 2020, Communities and Local Government, June 2009

1.5 Total reserves of crushed rock aggregate fell by 5.9 per cent from 293.1mt in 2012 to 275.76mt at 31 December 2013. Reserves of limestone fell in line with sales figures by 1.2 per cent from 160.2mt to 158.33mt. The fall in reserves of both High Specification Aggregate (HSA) and sandstone and igneous rock was higher than would have been expected and were recorded at 11.2 per cent and 15.8 per cent respectively. The higher than expected fall in HSA reserves is due to double counting in previous monitoring periods in Cumbria as set out in paragraph 1.2 above.

1.6 The crushed rock landbank for the north west as at 31 December 2013 was 28.7 years, far in excess of the minimum 10 year requirement. Landbanks for the sub-regions are detailed in the individual chapters.

Aggregate sand and gravel sales, reserves and landbank

1.7 Sales of land-won aggregate sand and gravel fell by 4.9 per cent from 2.01mt in 2012 to 1.91mt in 2013 but remain higher than the lowest recorded figure of 1.87mt in 2011. This is a smaller decrease than that experienced in sales of crushed rock aggregate during the same monitoring period.

1.8 Reserves of land-won aggregate sand and gravel also fell at a similar rate of 5.7 per cent from 38.61mt in 2012 to 36.39mt as at 31 December 2013. This fall is in line with what would have been expected given the sales levels for the same period. The sand and gravel landbank for the north west as at 31 December 2013 was 11.2 years, a reduction of less than a year from 11.8 years at the end of the 2012 monitoring period. Landbanks for the sub-regions are detailed in the individual chapters.

2 Cheshire East and Cheshire West and Chester

2.1 During the 2011 and 2012 monitoring periods data was collected for the two separate sub-regions of Cheshire East and Cheshire West and Chester. The result of this monitoring is being reported together to enable analysis of ten year supply patterns. The two sub-regions will be reported separately when sufficient data has been gathered. It should be noted that Cheshire West and Chester does not contain any permitted crushed rock aggregate reserves and therefore analysis relates solely to Cheshire East for this aggregate.

Aggregate crushed rock sales, reserves and landbank

2.2 Sales of aggregate land-won crushed rock from Cheshire East remained unchanged for the fifth consecutive monitoring period. Sales from the sub-region are consistently very low as the material is of a relatively low grade and is largely utilised as dressing stone, aggregate production is a by-product of the main uses. Reserves of aggregate crushed rock also remained unchanged and were recorded as 4.29mt as at 31 December 2013 providing for a landbank of 107.25 years. This large landbank should be treated with caution due to the lack of firm data relating to the proportion of aggregate in total reserves and the nature of the material produced.

Table 2.1 Cheshire East aggregate crushed rock landbanks as at 31 December 2013

	Landbank as at 31.12.2012	Permitted reserves as at 31.12.2013 (mt)	Annual apportionment requirement 2005-2020 (mt)	Landbank as at 31.12.2013 (years)
Cheshire East	107.25	4.29mt	0.04mt	107.25 years

Aggregate sand and gravel sales, reserves and landbank

Cheshire East

2.3 Sales of land-won aggregate sand and gravel in Cheshire East increased marginally by 2.5 per cent from 0.40mt in 2012 to 0.41mt. Due to the relatively new monitoring regime for the former Cheshire sub-region it is not possible to monitor any long-term sales pattern for Cheshire East. Reserves of sand and gravel fell by 7.5 per cent in line with the sales experienced during the monitoring period. The relatively stable level of sales has resulted in a minimal change to the landbank which at 31 December 2013 was 7.28 years. This is only slightly above the minimum seven year requirement expressed in the NPPF. However, it should be noted that the exact proportion of aggregate reserves, as part of larger reserves of industrial sand, is not known and therefore provision fluctuates in response to demand year on year. This will need to be continually reviewed in future Annual Monitoring Reports and Local Aggregate Assessments.

Cheshire West and Chester

2.4 Sales of land-won aggregate sand and gravel in Cheshire West and Chester fell by 23.6 per cent during the 2013 monitoring period from 0.55mt during 2012 to 0.42mt. As with Cheshire East, due to the short-term nature of monitoring for Cheshire West and Chester it is not possible to assess any established pattern, future monitoring will provide the opportunity to do this. Reserves of sand and gravel decreased by 4.6 per cent from 9.31mt as at 31 December 2012 to 8.88mt, in line with sales figures recorded. The landbank for sand and gravel as at 31 December 2013 was 11.1 years compared to 11.6 years at the end of 2012 monitoring period. This remains in excess of the minimum seven year requirement set out in the NPPF.

Table 2.2 Cheshire aggregate land-won sand and gravel landbanks as at 31 December 2013

	Landbank as at 31.12.2012	Permitted reserves as at 31.12.2013	Annual apportionment requirement 2005-2020 (mt)	Landbank as at 31.12.2013 (years)

3 Cumbria

3.1 For the purposes of annual monitoring, the Lake District National Park is included within the Cumbria sub-region. Landbank figures within this monitoring report are calculated using the most up to date apportionment figures. It should however be noted that Cumbria objected to this apportionment and therefore landbanks identified within this report do not reflect the landbank reported in the 'Cumbria and the Lake District National Park Second Joint Annual Local Aggregate Assessment 2014'.

Aggregate crushed rock sales, reserves and landbank

3.2 Total sales of aggregate crushed rock decreased during the 2013 monitoring period by 18.6 per cent from 2.95mt in 2012 to 2.40mt, the lowest recorded sales figure for over ten years. Sales of High Specification Aggregate (HSA) fell sharply by 25.5 per cent alongside a fall in sales of limestone of 20.2 per cent. This fall is due to the mothballing of one site within the area which has previously supplied circa 0.10mt per annum. Sales of sandstone and igneous rock remained unchanged for the third consecutive year at 0.37mt per annum suggesting a stable demand for this resource.

3.3 Recorded reserves of crushed rock aggregate fell during the monitoring period by 11.5 per cent from 136.7mt as 31 December 2012 to 121.03mt. Reserves of sandstone and igneous rock (non HSA) fell steeply by 55.9 per cent from 23.41mt as at 31 December 2012 to 10.33mt. This significant fall in reserves is due to double counting of reserves of sandstone and igneous rock during previous monitoring periods. Reserves of HSA fell by 16.3 per cent from 13.77mt as 31 December 2012 to 11.53mt, a much larger fall than expected given the reduced levels of sales for the monitoring period. Limestone reserves fell by only 0.39 per cent to 99.17mt which is 1.23mt higher than what would be expected given the sales figures for the monitoring period.

3.4 The crushed rock landbank continued to fall to 30.12 years as at 31 December 2013, just under four years lower than the landbank recorded for 2012 when a landbank of 34 years was recorded. This is a reflection of the falling levels of total crushed rock reserves, but is, however, significantly higher than the 10 year requirement set out in the NPPF.

Table 3.1 Cumbria aggregate crushed rock landbank as at 31 December 2013

	Landbank as at 31.12.2012	Permitted reserves as at 31.12.2013	Annual apportionment requirement 2005-2020 (mt)	Landbank as at 31.12.2013 (years)
Cumbria	34 years	121.03mt	4.02mt	30.12 years

Aggregate sand and gravel sales, reserves and landbank

3.5 Total sales of aggregate sand and gravel increased during 2013 by 4.3 per cent from 0.47mt in 2012 to 0.49 mt. This increase is due to the slight upturn in sales of land-won aggregate sand and gravel from 0.46mt in 2012 to 0.48mt. Landings of marine dredged aggregate sand and gravel remained

unchanged for the third consecutive monitoring period at 0.01mt per annum indicating a steady supply of aggregate from this resource.

3.6 Reserves of aggregate land-won sand and gravel fell by 6.6 per cent from 10.59mt as at 31 December 2012 to 9.89mt, 0.22mt lower than would have been expected given sales figures for the same period. The landbank for aggregate land-won sand and gravel has reduced slightly during the monitoring period from 12.03 years as at 31 December 2012 to 11.24 years. This remains in excess of the minimum seven year requirement set out in the NPPF.

Table 3.2 Cumbria aggregate land-won sand and gravel landbank as at 31 December 2013

4 Greater Manchester, Merseyside and Warrington

4.1 The metropolitan boroughs of Greater Manchester (Bolton, Bury, Manchester City, Oldham, Rochdale, Salford, Tameside, Trafford and Wigan) are represented by the Minerals and Waste Planning Unit and the metropolitan boroughs of Merseyside (Knowsley, Liverpool City, Sefton, St Helens and Wirral) are represented by the Merseyside Environment Advisory Service. Halton and Warrington deal with all mineral planning issues as individual authorities, although Halton does not currently have any permitted primary aggregate sites.

Aggregate crushed rock sales, reserves and landbank

4.2 Sales of aggregate crushed rock reduced during the 2013 monitoring period by 48 per cent from 0.81mt in 2012 to 0.42mt. The sales figure is however in line with previous sales patterns experienced between 2009 - 2011 and is an indication of the current instability in the market.

4.3 Reserves of crushed rock aggregate increased by 1.2 per cent from 20.06mt as at 31 December 2012 to 20.3mt. The landbank as at 31 December 2013 also increased to 15.4 years from 15.2 years as at 31 December 2012 and remains in excess of the minimum 10 year requirement as expressed in the NPPF. However, it should be noted that this increase is due to the incorrect reporting of reserve levels at one site in previous years and does not therefore reflect a new increase.

Table 4.1 Greater Manchester, Merseyside and Warrington aggregate crushed rock landbank as at 31 December 2013

	Landbank as at 31.12.2012	Permitted reserves as at 31.12.2013 (mt)	Annual apportionment requirement 2005-2020 (mt)	Landbank as at 31.12.2013 (years)
Greater Manchester, Merseyside, and Warrington	15.2 years	20.3mt	1.32mt	15.4 years

Aggregate sand and gravel sales, reserves and landbank

4.4 Total sales of aggregate sand and gravel increased by 20 per cent during the monitoring period from 0.45mt in 2012 to 0.54mt. This increase is due to the 43 per cent rise in landings of marine dredged sand and gravel from 0.21mt in 2012 to 0.30mt. Sales of land won aggregate sand and gravel remained at 2011 levels for the third consecutive year indicating a steady demand and supply pattern in this sub-region in recent years.

4.5 Reserves of land-won sand and gravel fell by 0.25mt in line with the sales figure of 0.24mt for the monitoring period. The landbank for aggregate land-won sand and gravel also reduced by approximately 6 months to 9.9 years as at 31 December 2013. This remains in excess of the 7 year minimum requirement expressed in the NPPF and will continue to be monitored through both the North West AWP Annual Monitoring Reports and the sub-region's Local Aggregate Assessment.

Table 4.2 Greater Manchester, Merseyside and Warrington aggregate land-won sand and gravel landbank as at 31 December 2013

5 Lancashire

5.1 For the purposes of annual monitoring, the authorities of Blackpool and Blackburn with Darwen are included within the Lancashire sub-region.

Aggregate crushed rock sales, reserves and landbank

5.2 Sales of crushed rock aggregate fell during the monitoring period by 11.9 per cent from 2.44mt in 2012 to 2.15mt, although this is roughly in line with patterns experienced since 2008 this is the lowest recorded figure for over 10 years. The largest fall was in sales of sandstone where sales fell by 28.7 per cent from 0.94mt in 2012 to 0.67mt, however sales remain higher than in 2009 and 2010. The fall in sales of limestone was marginal at 1.3 per cent from 1.50mt in 2012 to 1.48mt.

5.3 Total crushed rock reserves fell slightly by 1.4 per cent, in line with what would have been expected from 132.1mt as 31 December 2012 to 130.21mt. Reserves of limestone fell by 2.4 per cent during 2013 whilst reserves of sandstone fell by only 0.5 per cent. The landbank for crushed rock reduced during the 2013 monitoring period from 31.15 years as at 31 December 2012 to 30.7 years, far in excess of the ten year minimum requirement set out in the NPPF.

Table 5.1 Lancashire aggregate crushed rock landbank as at 31 December 2013

	Landbank as at 31.12.2012	Permitted reserves as at 31.12.2013 (mt)	Annual apportionment requirement 2005-2020 (mt)	Landbank as at 31.12.2013 (years)
Lancashire	31.15 years	130.21mt	4.24mt	30.7 years

Aggregate sand and gravel sales, reserves and landbank

5.4 Land-won aggregate sand and gravel sales remained at 0.36mt for the second consecutive monitoring period. Sales have been relatively stable since 2005, apart from a decline in 2011, indicating a potentially stable market for this material. Reserves of sand and gravel have decreased by 2.2 per cent from 8.36mt as at 31 December 2012 to 8.18mt.

5.5 The landbank for aggregate sand and gravel fell slightly during the monitoring period from 19 years as at 31 December 2012 to 18.6 years, in line with the marginal drop in reserves. The landbank remains far in excess of the minimum seven year requirement expressed in the NPPF.

Table 5.2 Lancashire aggregate land-won sand and gravel landbank as at 31 December 2013

	Landbank as at 31.12.2012	Permitted reserves as at 31.12.2013	Annual apportionment requirement 2005-2020 (mt)	Landbank as at 31.12.2013 (years)

5.6 Permission was allowed to lapse on one Phase II site as it was superseded by modern planning permission.

6 Marine dredged aggregate

6.1 The Crown Estate along with the British Marine Aggregate Producers Association (BMAPA) publish reserve and dredge statistics on an annual basis. The report 'Marine Aggregates The Crown Estate Licences Summary of Statistics 2013' provides summary statistics relating to the dredging and landing of marine dredged aggregate sand. Reserve information is published by The Crown Estate in the Capability and Portfolio report. In addition The Crown Estate and BMAPA publish a summary of the extraction activity in the Area Involved Report, the 16th of which was published in September 2014. Table 6.1 provides detail of the north west dredging areas, Tables 6.2 and 6.3 provide removal and landing statistics for the north west.

6.2 During the 2013 monitoring period there were four active dredging areas operating in water off the north west coast.

Table 6.1 North West marine licences and dredging areas 2013

Area no:	Area name	Licence type	Licence holder	Operational status 2013
331	Morecambe Bay	Active dredge area / application area	Tarmac Marine Dredging Limited	Active
392	Hilbre Swash	Active dredge area / application area	Tarmac Marine Dredging Limited	Active
393	Hilbre, Swash	Active dredge area / application area	Norwest Sand & Ballast Co. Ltd	Active
457	Liverpool Bay	Active dredge area / application area / Option area	Westminster Gravels Ltd	Active

6.3 A total of 858,813 tonnes of material was removed from permitted dredging areas off the north west coast during the 2013 monitoring period, the highest level of removal for over nine years representing an 86 per cent increase in removal levels from 2012. This increase is due to the removal of 480,000 tonnes of beach nourishment material which served a specific project and does not represent an annual requirement for the material. The amount of primary aggregate removed also increased during the monitoring period by 33 per cent to 378,813 tonnes bringing removal rates back to levels experienced in 2008.

6.4 Of the total 858,813 tonnes of material removed only 369,201 tonnes was landed at permitted landing points within the north west. However, landing within the north west (excluding landings at Penrhyn) have increased in line with the rise in removal rates, rising by 46 per cent from 215,359 in 2012 to a total of 315,501 during 2013. The largest increase was in landings at Liverpool wharves where landings rose by 48 per cent from 205,528 in 2012 to 303,696 during 2013. It should also be noted that large quantities of imported crushed rock from Glensanda Quarry are also landed at Port of

Liverpool by Aggregate Industries. However, this material is not included in any of the calculations within this report.

6.5 The 'Marine Aggregates Capability and Portfolio document 2014' reports that there are currently 17.63mt of primary marine aggregate reserves in the north west dredging areas, which when compared to the 10 year average annual offtake rate would provide a reserve life of approximately 34.76 years.

NPPF	National Planning Policy Framework
NWAWP	North West Aggregate Working Party

C Glossary

Apportionment - currently set by the 'National and regional guidelines for aggregate provision in England 2005-2020', a specified amount of aggregates to be produced annually on a sub-regional basis.

Core Strategy/Local Plan - a plan setting out the spatial vision for the Local Planning Authority area, the spatial objectives and strategic policies to deliver that vision.

Duty to co-operate - introduced by the Town & Country Planning (Local Planning) (England) Regulations 2012, requires Local Authorities and other public bodies to co-operate on planning issues.

High Specification Aggregate - natural and artificial coarse aggregates which meet the physical test criteria for Polished Stone Value and Aggregate Abrasion Value.

Licence Application Area - areas which are in the process of being developed for new licence dredge areas. These areas are subject to a full environmental impact assessment and public consultation before permission is granted by the Marine Management Organisation.

Licensed Dredge Area - active licensed dredge areas.

Licence Option Area - awarded by the Crown Estate following a successful tender by a company seeking to develop a new dredging area. The company is permitted to explore the area for viable resources during a period of 5 years, during which the licence application process must be completed.
